

SELECTIVE TRANSMISSION OF AN EMAIL ATTACHMENT

5

ABSTRACT OF THE DISCLOSURE

Methods, devices, systems, and media are disclosed for replacing an email attachment with a call, and forwarding the email with the call to a user for selective display of the attachment by making a call. One embodiment includes receiving an email on a mail server, wherein the email has the email attachment, and removing the email attachment from the email to produce a stripped email. The embodiment further includes storing the email attachment on a server, adding the call to the stripped email, and forwarding the stripped email with the call for displaying to a recipient.
